

Detecting document forgeries

Document verification systems for secure identities

Document verification made easy.

It is not just border control officers who have to be able to verify the authenticity of a passport or ID card both quickly and reliably. In order to secure business processes at companies, staff there also need to be able to reliably detect forged ID documents, for instance, when a bank account is being opened or a mobile phone contract signed.

Reliable and prompt results. In order to deliver unambiguous results during document verification, Bundesdruckerei has come up with a powerful document verification system that can quickly and reliably check close to 1,800 different ID documents from almost every country around the globe. Irregularities in the optical and electronic security features are automatically identified and displayed. User-friendly design combined with robust materials create a system perfectly designed for day-to-day use.

**AROUND
70,000**

**forged documents recorded in
the 2016 Police Crime Statistics
Report, up 13 percent against the
previous year.**

2016 (page 111)

Get fast and reliable results with VISOCORE®

Whether opening a bank account or signing a mobile phone contract, document verification systems ensure unambiguous verification results and greater security. VISOCORE®, Bundesdruckerei's document verification system, generates a signed report for each document verification case. This enables comprehensive documentation of identity checks in line with data protection requirements. Relevant data can be passed on to your company's processing systems. A user-friendly device and intuitive operation ensure a high degree of user acceptance.

Advantages at a glance

- Reliable – recognition and unambiguous verification of close to 1,800 different ID documents from almost all countries
- Convenient – compact, user-friendly design, easy to integrate into existing systems
- Efficient – best results thanks to automatic verification of optical and electronic security features
- Long life – robust, maintenance-free components

Our solution packages for companies

VISOCORE® OFFICE

The VISOCORE® OFFICE system is made up of the VISOTEC® Expert 800 document reader and the VISOCORE® VERIFY document verification software. The verification software immediately shows the user whether the ID document, passport or driving licence presented is genuine. VISOCORE® OFFICE is ideal for checking customer IDs on site.

VISOCORE® PROFESSIONAL

When it comes to checking if and where a document has been manipulated, document experts rely on VISOCORE® PROFESSIONAL. This package comes with the compact VISOTEC® EXPERT 800 reading device and VISOCORE® INSPECT software. This software enables detailed deviation analysis when irregularities are found in a document.

VISOCORE® BACKOFFICE

VISOCORE® BACKOFFICE is the perfect addition for companies with several workplaces with customer contact or for companies with many different branch offices. While VISOCORE® OFFICE is used at the front desk, VISOCORE® BACKOFFICE rounds off the system with a back office workplace that uses VISOCORE® Inspect. If irregularities are found during document verification, an expert can use the analysis software to identify the problem and instruct the user on site on how to proceed in line with company rules.

ABOUT BUNDESDRUCKEREI

Bundesdruckerei GmbH offers innovative and complete IT security solutions for private companies, governments and public authorities. The company's technologies and services, all 'Made in Germany', protect sensitive data, communications and infrastructures. The solutions are rooted in the secure identification of citizens, customers, employees and systems in both the analogue and digital world. Bundesdruckerei offers its customers a one-stop approach that begins with consultancy, includes design and implementation and is completed with operation and service.
